The installation onto a lift truck of non-certified electronic components may invalidate a truck's UL EE or LPS listing and could pose a safety risk. Customers with UL-listed lift trucks are solely responsible for ensuring compliance with UL for field modifications. The installation onto a lift truck of non-certified electronic components may invalidate a truck's UL EE or LPS listing and could pose a safety risk. Customers with UL-listed lift trucks are solely responsible for ensuring compliance with UL for field modifications. The selection of non-OEM parts is made solely by the customer with the awareness that OEM parts are available. Crown Equipment Corporation is unaware of what testing and/or certification, if any, the non-OEM parts have undergone and disclaims all warranties and representations regarding any non-OEM part.

Notes:

Seat belts meet requirements of SAE J386 and FMVSS 302.

An open circuit, when wired, does not require the latch (male side) be inserted into the buckle in order to start the forklift. If wired to a buzzer or to an alarm, they will sound until the latch (male side) is inserted into the buckle or if wired to a dash lamp, the lamp will stay illuminated until the latch (male side) is inserted into the buckle. A closed circuit, when wired, requires that the latch (male side) be inserted into the buckle to complete the circuit in order to be able to start the forklift.

FIVE RING DESIGN - The five rib design prevents flashover and reduces voltage loss. It offers 20% more insulation than conventional plugs. This improved performance is especially significant in plugs with a large gap operating under high voltage.

INSULATOR - The insulators are made of a highly purified alumina powder, which gives strength and thermal conductivity at high temperatures, as well as greater physical strength.

SPECIAL COPPER-GLASS SEAL - A special mixture of copper and glass powder bonds the center electrode and insulator together for a gas-tight seal. Proper heat is maintained and hot combustion gases are excluded.

U-GROOVED GROUND ELECTRODE - This U-Groove allows the spark to fill the gap formed by the U. The ball of fire develops, a larger and hotter flash front, so that the combustion is more complete.

COPPER CORED CENTER ELECTRODE - A special center electrode incorporates copper into the core of the nickel chrome binary alloy. This gives superior thermal conductivity, and increases the operating range.

The installation onto a lift truck of non-certified electronic components may invalidate a truck's UL EE or LPS listing and could pose a safety risk. Customers with UL-listed lift trucks are solely responsible for ensuring compliance with UL for field modifications. The selection of non-OEM parts is made solely by the customer with the awareness that OEM parts are available. Crown Equipment Corporation is unaware of what testing and/or certification, if any, the non-OEM parts have undergone and disclaims all warranties and representations regarding any non-OEM part.

The installation onto a lift truck of non-certified electronic components may invalidate a truck's UL EE or LPS listing and could pose a safety risk. Customers with UL-listed lift trucks are solely responsible for ensuring compliance with UL for field modifications. Fork extensions are lift truck attachments that increase the fork's effective length for handling oversized uniformly distributed loads. When installed, fork extensions influence the truck's capacity and therefore in accordance with the law – OSHA 1910.178, the User is to request an authorization from their local dealer for a new capacity plate for their specific truck equipped with fork extensions. Maximum uniform capacity is 4,000 lbs. evenly distributed per pair.

1910.178(a)(4)
Modifications and additions which affect capacity and safe operation shall not be performed by the customer or user without manufacturers prior written approval. Capacity, operation, and maintenance instruction plates, tags, or decals shall be changed accordingly.

1910.178(a)(5)
If the truck is equipped with front-end attachments other than factory installed attachments, the user shall request that the truck be marked to identify the attachments and show the approximate weight of the truck and attachment combination at maximum elevation with load laterally centered.

Fork extension length should not be more than 150% of supporting fork length.

Note: 1910.178(q)(5) (1998) of the Occupational Safety and Health Act (OSHA) requires that "All parts of any such industrial truck requiring replacement shall be replaced only by parts equivalent as to safety with those used in the original design."

The installation onto a lift truck of non-certified electronic components may invalidate a truck's UL EE or LPS listing and could pose a safety risk. Customers with UL-listed lift trucks are solely responsible for ensuring compliance with UL for field modifications. The selection of non-OEM parts is made solely by the customer with the awareness that OEM parts are available. Crown Equipment Corporation is unaware of what testing and/or certification, if any, the non-OEM parts have undergone and disclaims all warranties and representations regarding any non-OEM part.

Steps to determine correct cable and connector housing: **1.** Reference the Cable Size Matrix Chart to identify your charger model and the corresponding cable size. **2.** Reference the Chart to make the connector housing selection (typically customer/application specific). **3. All cable assemblies will require the 078723-001 gray 350SB connector housing for the charger end. (If dual cables are ordered for fast charging, then 2 of the gray SB connectors will be required.)** **4.** Selection of the other connector housing(s) is based on the cable specified per the customer's location. *Example: FS9-MP330-8 with 350SBX (Blue) 15 ft. cable — Cable Assembly Part Number: 39653X-350-15 – qty 2; Connector Housing Part Number: 078723-001 – qty 2; 340090-002 – qty 2.*

V-Force® Lithium-Ion Energy Storage Systems

The V-Force® Lithium-Ion ESS is fully integrated with a full line of Crown lift trucks for flexibility, scalability and convenience.

- **Lower Maintenance, Lower Costs** – Eliminates the time-consuming tasks associated with lead-acid batteries including battery changes, watering or special battery rooms.
- **Improved Efficiency** – Achieve greater efficiency, higher sustained voltage properties as the battery discharges.
- **True Opportunity Charging** – Increase uptime with periodic opportunity charging, enabling one lithium-ion battery to achieve more run time in a 24-hour period.
- **No Battery Swapping** – One lithium-ion battery can handle one shift or multiple shifts with no need for extra batteries or the downtime required to change them.
- **Increased Safety** – Zero emissions during charging means no gassing and no exposure to harmful acids and vapors. A multi-level safety architecture provides complete protection during use.
- **Longer Life** – Lithium-ion batteries outperform lead-acid batteries, saving replacement and service costs over time.

Note: Communication/Diagnostic Kit (Part No. 165064) includes Communication Y cable and Peak Can Dongle. Communication/Diagnostic Cable Only (Part No. 165541-001)

V-Force Lithium Ion Energy Storage Systems for WP Series Pallet Truck

The V-Force Lithium Ion Pack's design supports superior functionality to promote easier, more efficient use

- Integrated on-board charger
- Fully integrated with truck display showing battery discharge levels and warnings
- Connection to the Early Warning System alerts the operator before the battery stops truck operation
- The battery management system extends battery life by preventing abuse and operation outside warranted conditions
- **Longer Life** - Can undergo considerably more charge/discharge cycles than lead acid batteries before their capacity is significantly reduced
- **Extended Run Time** - Higher energy density, often resulting in longer run time versus lead acid batteries
- **More Efficient** - More energy efficient when charging and discharging, reducing carbon footprint
- **Safer and Easier to Maintain** - Maintenance free, eliminating the need for battery watering and avoiding the exposure of your employees to harmful acid and vapors
- CE compliant and UL Listed
- Warranty - 5 years from date of sale, or when reaching Maximum Ah Throughput, which is 2000 cycles x 80% of the battery capacity

Note: Authorization of Modification is needed for trucks not already modified for lithium ion batteries by Crown Equipment.

Communication Accessory Kit (P.N. 164423-001): Includes: 24V Jumper Plug for deeply discharged recovery. Communication Peak Can Dongle, Communication Cable for downloading data and diagnostics, and Replacement Comms Cable.

V-Force Lead Acid Batteries

With a lower initial cost than other battery technologies, V-Force lead acid batteries can provide a cost-effective power solution for a range of duty cycles, including multi-shift operations.

Flat Plate Lead-Acid Batteries

This traditional time-tested battery design for electric lift trucks features:

- Robust design for durability in rough applications
- More active material for greater performance and capacity
- Heavy grid construction to limit corrosion
- Exclusive five-layer wrap to minimize positive active material shedding
- Lower initial cost

Tubular Lead-Acid Batteries

This advanced lead-acid technology increases the surface area of active material, improving productivity and extending runtimes for multi-shift applications.

- Flexible bolt-on inter-cell cable connectors for easy maintenance, higher current delivery with less internal resistance and lower operating temperatures
- Fully insulated flex connectors and post bolts to prevent arcing and lead exposure
- V-LA1120 Series - Standard low maintenance cells that hold more water, reducing watering frequency and maintenance costs
- V-LA1130 Series - High capacity cells for increased run time for high duty cycle applications

V-Force® Barbed Watering Float System Kits

V-Force Barbed Valve Battery Watering Float Systems make the watering of your industrial batteries faster and safer. You will need two components: a water supply (found throughout the One Source Catalog) and one of the part numbers found below. If you have a Philadelphia Scientific Water Supply, you can order a V-Force Float System (e.g. 300316-012-INJ) to replace your existing Stealth Kit or an Injector Kit.

The process is simple. First, identify the manufacturer of your water supply (e.g. Philadelphia Scientific, Battery Filling Systems (BFS), Battery Watering Technologies (BWT), V-Force, or Flow Rite). Then, identify the battery manufacturer; Douglas batteries will require a DIN adapter, which is included. Next, determine the battery voltage (24V, 36V, 48V). The final step is to select the watering system from the table below. The adapters shown are included so you can connect the kit you choose to your water supply.

Voltage	CPC 3/4" input Brands used with Crown V-Force (most common), Philadelphia Scientific Stealth and Flow-Rite. Select a system below.	CPC 1/2" input (used primarily with BWT (Battery Watering Technologies). Select a system below.	BFS input (used primarily with BWT (Battery Watering Technologies). Select a system below.	Quick Connect Input Brands used with are Philadelphia Scientific Water Injector and Water Injector Spider. Select a system below.

Douglas Batteries (DIN vent openings): 24V-300316-012-01, 36V-300316-018-01, 48V-300316-024-01, 80V-300316-040-01

NOTE: Tubing cutter P.N. 3003227-allation tool and P.N. 300310-022 are helpful for installation of V-Force Float Watering Systems.

NOTE: V-Force watering kits installed from the factory on V-Force lead-acid batteries (Part# ending with -INS or -INP) use the same components as the kits above.

* Use on Douglas Batteries

Note: Tubing cutter 300227-007 and collar installation tool #300310-022 are required for installation of the spider injector watering system.

Note: Prestrung options available upon request.

ATTENTION: Spider Injector Watering Systems require a minimum of 25 psi and maximum of 35 psi flowing water at a rate of 8 gallons per minute. If the flow is inadequate, the Injectors will not shut off. If a factory authorized water supply is not being used water pressure from the wall must be confirmed with a 300310-027 Water Flow Pressure Measurement Tool.

Features

- **Very Fast Operation:** An average industrial truck battery can be filled, with precise level control, in less than 15 seconds. The savings in labor costs alone often pays for the system within its first year of operation.
- **Quality of Watering:** It extends the life of each expensive battery it is installed on due to improved quality of watering. The battery is properly watered every time.
- **Safety and Environmental Cleanliness:** There is no need to peer into cells to inspect levels as with manual filling. Spider Injector Watering Systems automatically fill each cell to the correct level, so no overfilling and no electrolyte overflow during charge.
- **Compact:** A very low profile allows them to fit on almost any battery. Spider Injectors can **snap in and out** to allow inspection of electrolyte levels and specific gravities.
- **Rugged:** Tough enough to survive impacts, abuse and extremes of battery temperatures. There are no exposed parts to break off even when a Spider Injector is removed from a cell. True level sensing mechanism. Needs no submergence to sense level as a float does. Can work right down to the top of the separators. Will not fail if it touches cell components.
- **No-Freeze Tubing:** The surplus water drains from the tubing into cells after filling is complete. This allows the system to be used in cold stores and other freezing environments.
- **2-Stage Filtration:** In addition to the filter screen in the water tubing, each Spider Injector has its own individual filter.
- **Easy Installation:** Features flexible push tubing.
- **5-Year Warranty:** Warrantable against defects in materials and workmanship.

Note: 1910.178(q)(5) (1998) of the Occupational Safety and Health Act (OSHA) requires that "All parts of any such industrial truck requiring replacement shall be replaced only by parts equivalent as to safety with those used in the original design."

The installation onto a lift truck of non-certified electronic components may invalidate a truck's UL EE or LPS listing and could pose a safety risk. Customers with UL-listed lift trucks are solely responsible for ensuring compliance with UL for field modifications. The selection of non-OEM parts is made solely by the customer with the awareness that OEM parts are available. Crown Equipment Corporation is unaware of what testing and/or certification, if any, the non-OEM parts have undergone and disclaims all warranties and representations regarding any non-OEM part.

The Crown tool program offers high quality tools selected specifically for technicians to handle most lift truck repairs. Each item offered in the Crown tool kit is individually labeled with the Crown logo and Crown part number.

Note: 1910.178(q)(5) (1998) of the Occupational Safety and Health Act (OSHA) requires that "All parts of any such industrial truck requiring replacement shall be replaced only by parts equivalent as to safety with those used in the original design."

The installation onto a lift truck of non-certified electronic components may invalidate a truck's UL EE or LPS listing and could pose a safety risk. Customers with UL-listed lift trucks are solely responsible for ensuring compliance with UL for field modifications. The selection of non-OEM parts is made solely by the customer with the awareness that OEM parts are available. Crown Equipment Corporation is unaware of what testing and/or certification, if any, the non-OEM parts have undergone and disclaims all warranties and representations regarding any non-OEM part.

CROWN OPERATOR AND SERVICE TRAINING

DP MoveSafe® - Train-the-Operator

Crown's nationwide network of trained instructors offer full-service training programs. Conducted at your site, these highly trained instructor led sessions present the full gamut of powered industrial truck safety information with clear, understandable and highly visual video and animated presentations. Hands-on time is maximized and structured to assure your operators are trained not only in truck operation and task performance, but in safe operating habits and practices as well. These are crucial in the effective training of your operators.

Contact your local Crown lift truck dealer for available dates and pricing.

DP LeadSafe® - Train-the-Supervisor

Supervisors of lift truck operators play a critical role in reinforcing the safe operating skills and habits taught during operator training sessions. To help them do this, Crown offers the award winning* LeadSafe Program in a Demonstrated Performance format to help them learn and demonstrate how to effectively supervise lift truck operators and reinforce safe operating habits.

The workshop covers topics such as: Identifying Proper and Improper Operation, Recognizing Potential Hazards, and Giving Feedback to Operators.

Contact your local Crown lift truck dealer for pricing. Crown's Operator Training Programs are optimized for interactive streaming. The training can be hosted and tracked on Crown's Learning Management System (LMS) or utilized within your current Learning Management System (LMS). Each program has a step by step interface guiding the user through the training process.

DP TrainSafe® - Train-the-Trainer

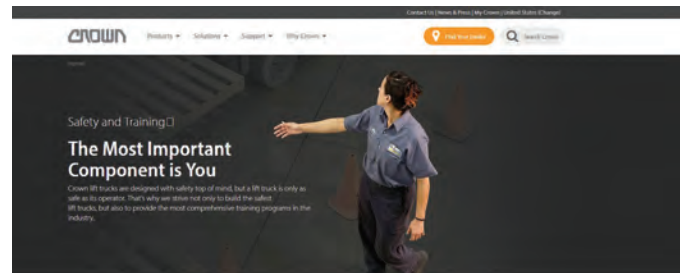

DP TrainSafe uses Crown's award winning, hands-on, Demonstrated Performance approach to deliver the best and most comprehensive operator train-the-trainer program in the industry. Participants in the two day TrainSafe program will learn and practice implementing Crown's MoveSafe operator training programs, 11 step hands-on training and safe skill and habit development process. Trainers will leave with the training needed to conduct these workshops, as well as three year re-evaluations, safety refreshers (workshops), warehouse inspections, and much more.

DP TrainSafe is offered at most Crown dealers.

Contact your local Crown lift truck dealer for available dates and pricing.

CROWN OPERATOR AND SERVICE TRAINING

DP Service Training - For your Lift Truck Technicians

Our award winning* Demonstrated Performance service training workshops give your technicians the Crown-specific skills and knowledge they need to keep your Crown fleet up and running. Since many technicians are hands-on learners, they're more likely to retain information learned through first-hand experience than material presented in a lecture. Crown's Demonstrated Performance Service Technician Training goes above and beyond traditional classroom training, allowing participants to work on trucks with instructor supervision. Technicians can move at their own pace and focus on the particular tasks and skill groups that best serve their organization's needs.

**Learn It.
Do It.
Use It.[®]**

This defines the philosophy behind Crown DP training. Participants "Learn it" by reading the module, reviewing any reference material, and practicing the required skills. Then they "Do it" by performing what we call a "skill check" for the instructor to demonstrate their ability to perform the skill. This prepares them to bring their newly acquired skills back to their job and "Use it" to improve the uptime and reliability of Crown lift trucks.

Demonstrated Performance workshops are completely customizable to the needs of your technician. They'll only spend time on what they need to learn, and only work on the trucks that apply to them. For example, they won't spend two hours learning about basic electricity if they already know it. Before the DP training course spend some time talking to your technician about what you want them to cover during the session. Do you want them to focus on mechanical topics, such as repairing or replacing components? Or do you want them to learn how to troubleshoot the electrical system? Contact one of the following Regional Training Centers and the Regional Service Trainer to have a customized training course map developed to match your need.

DP Service Training is offered at the following Regional Training Centers. To schedule, email Education.center@crowne.com
